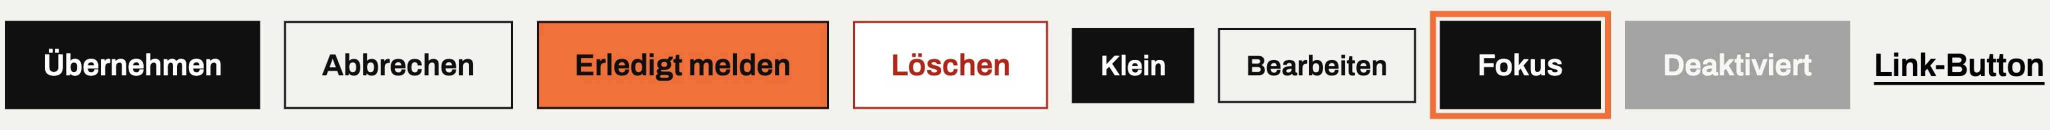
SLICE 0 · PRIMITIVES + APP SHELL

Primitives & layout

Exactly the list in ROADMAP slice 0, drawn as the prototype draws them. Mono captions give the proposed Svelte component and its props; class names in brackets are the prototype's.

Button

`<Button variant="primary|ghost|accent" size="md|sm" block> · danger as tone [.btn]`



Primary is black, not orange — orange is reserved for "this is the active thing". Prototype has 4 variants + danger; keep danger as a separate `tone` prop to stay within the three-value rule.

FormField · Input · Select · Textarea · Checkbox

`<FormField label hint error> wires aria-describedby [.lbl .field .help .err]`

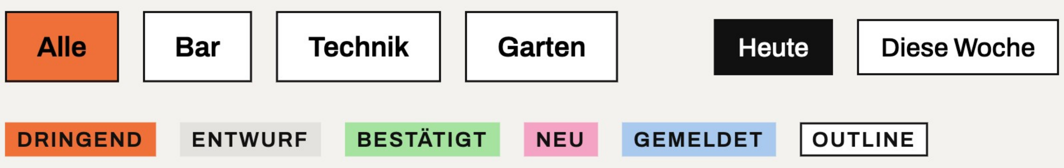
Chip · Badge

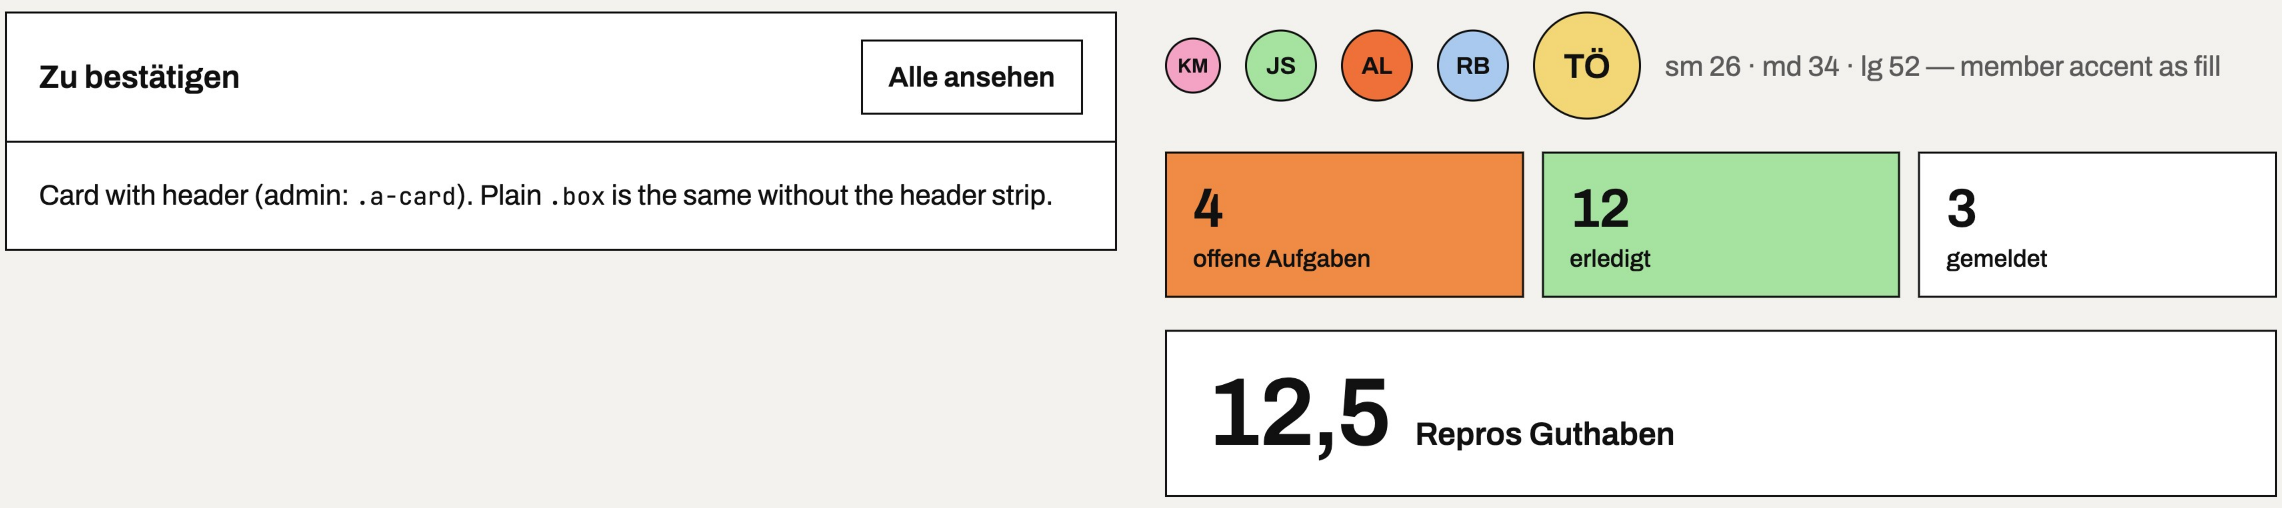
`<Chip pressed size="md|sub"> · <Badge tone> [.chip .badge]`



Badge has 6 tones in the prototype — over the three-value limit. Suggest mapping to status (angenommen / gemeldet / bestätigt) rather than to colour names.

Card · Avatar · stat tile · balance

`<Card> [.box .a-card] · <Avatar size color> · tile / saldo stay in routes until 2nd use`



Zu bestätigen

Card with header (admin: `.a-card`). Plain `.box` is the same without the header strip.

sm 26 · md 34 · lg 52 — member accent as fill

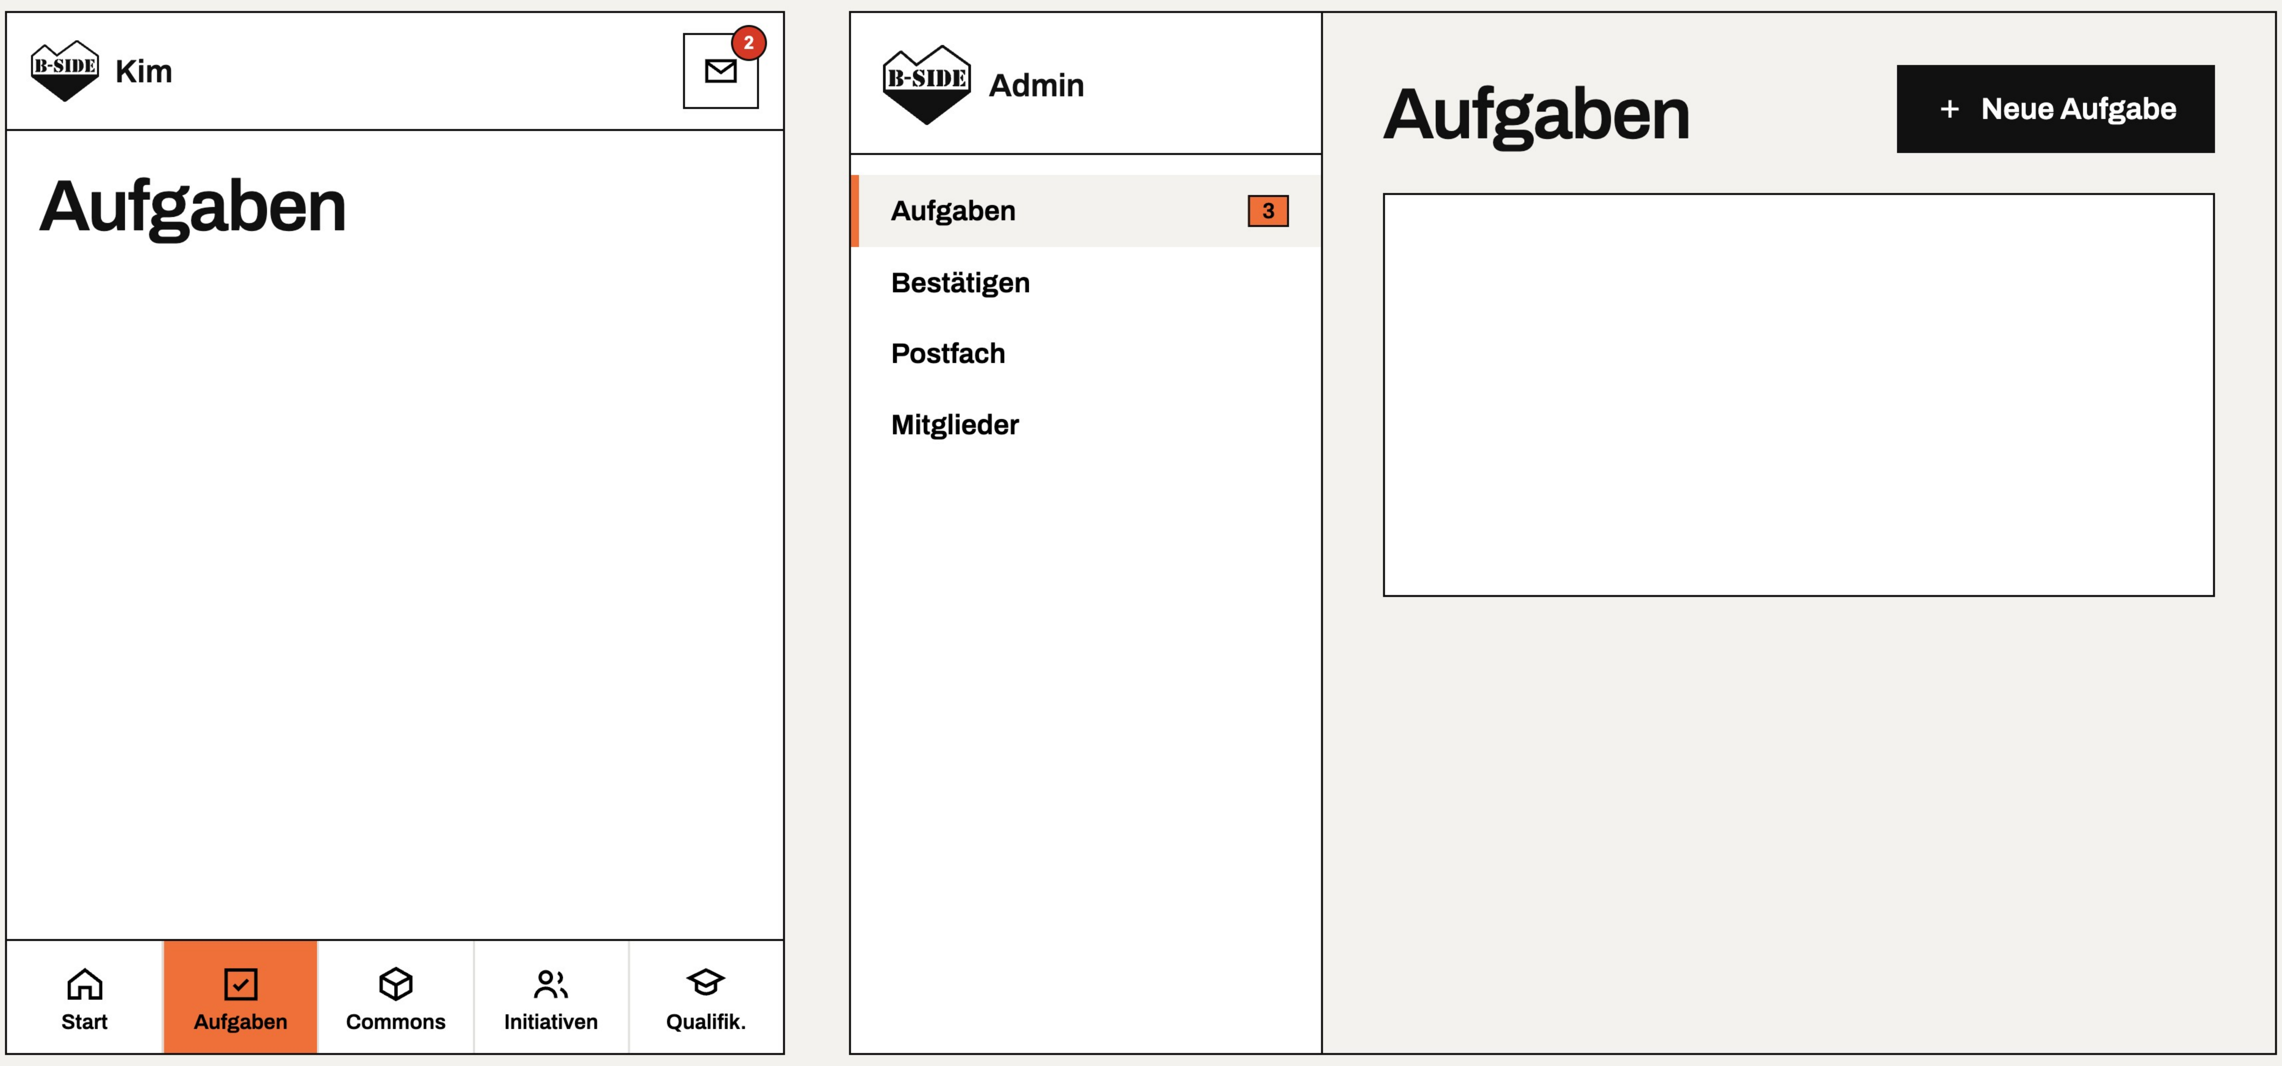
Schau später wieder vorbei oder ändere den Filter.

EmptyState reuses the prototype's dashed `.locked` box. Success "thanks" card: green fill, 1px #7cc47a border.

App shell

`<AppShell variant="member|admin"> · member: bottom nav <900px, side nav above`



One shell, two variants. Member desktop (≥900px): 250px side nav, active item = area colour + 5px ink left edge. Admin: 236px side nav on canvas bg, active = 4px orange left edge; collapses to a horizontal top tab strip under 760px. Icons: 24-grid outline, stroke 1.9, currentColor.
